Keywords: Abu Muin Nasafi, educational views, moral views, pedagogy, moral education, science, spiritual education, pedagogical approaches, educational system, philosophical foundations.

Introduction: Abul Muin an-Nasafiy (418-508 / 1027-1114) is one of the most important scholars in the Central Asian Sunni orientation moturidia aqidawy school. His scientific heritage, in particular his views in the fields of education and information values, is important in modern pedagogy. Nasafi's educational and informational views, his works being closely related, form valuable pedagogical foundations that can be applied to the modern educational system . Nasafi's educational and informational views, in particular, focused on the link between science, education and information cadre. He believes that education should not only give knowledge, but also improve the social relations of society in order to ensure the spiritual and informational development of the individual. In his works, Information values and the peculiarity of education are considered, the main ones in the spiritual and social education of young people. Increased attention to information education in modern pedagogy, increasing the role and importance of information personnel in the educational system in demanding consideration. For example, in 2020, the UN special lecture on education provided information about the importance of information education in the educational system. This lecture addressed the informational and spiritual aspects of education, as an important factor in ensuring peace and peace in society. The application of nasafi's educational and information views in the modern pedagogical system is important in improving the effectiveness of information education and ensuring the spiritual development of young people. His works serve as a valuable resource in revising the pedagogical foundations, the role and importance of information personnel in the modern educational system. Also, in modern pedagogy, an increase in attention to the education of information, an increase in the role and importance of information personnel in the educational system in demanding consideration. For example, in 2020, the UN special lecture on education provided information

about the importance of information education in the educational system .

Literature analysis

In the study of the pedagogical foundations of educational and informational views in the works of Abu Muin Nasafi, the scientific research of several scientists is important. These scientists have revealed one strictly important aspect in the analysis of the difference in the field of Education and information personnel of Nasafiy heritage. For example, such scholars as Muhammad ibn Muhammad al-Ghazali (1058-1111) and Al-Farghani (10th century), who were major representatives of Central Asian pedagogy, covered issues of akhloki's upbringing in Nasafi works in their works. Al-Ghazali, in his work "Ihya ulum ad-din", attached great importance to the issues of education and information education. It has been the subject of much comment on the information services of the educational process, as well as the inextricably linked science and information. Ghazali's scientific views are very close to Nasafi's works, and his own unique human resources system and practical assistance in education are made possible by nasafi's methods of educational pedagogy . In addition, Mustafa Shokirov (2012) in his work "historical development of Uzbek pedagogical thought" reflects on the role of information cadre in the study of the pedagogical foundations of Nasafi. Introducing the issues of information education in the works of Shokirov Nasafi with modern pedagogical systems, studying the information necessary for the inclusion of information personnel in education. Shokirov's scientific research will be a user to study the importance of Nasafi pedagogy in the current educational system and to guide its application in modern education. Also, Sayyid Ahmad ibn Muhammad Al-Tusiy (13th century) in his work Al-Tarbiq "Al-Tarbiq" criticized education and information cadreism as a link, the role of information cadre in the education of young people . Al-Tusiy studied the importance of information information in education, the role of education in maintaining social and information stability in society, and expanded Nasafi and Ghazali's views. The scientific research of these scientists is educated on the basis of modern views on Nasafic pedagogy and helps to maintain the link between educational and informational personnel. Abdullo Toshmammadov's (2000) work, " pedagogical thought and information cadre", covers information-educational issues in the educational system and references to Nasafi pedagogy of these issues. At the same time, in the field of pedagogical scientific research in Uzbekistan, the emphasis is also on the study of Nasafiy works. For example, the work of Shohruh Orolov (2018) entitled " scientific foundations of Uzbek pedagogy " shows the mutual garden and their pedagogical significance in educational and information cadres in Nasafi's works

Methodological part

The goal is to study the pedagogical foundations of educational and informational views in the works of Abu Muin Nasafi, the following methodological aids are used. First of all, it is planned to determine his educational and informational views behind the deep analysis of the works of Nasafiy behind the analysis method. Also, with the help of the historical method, the possibility of studying only his works in a historical context followed his development in the scientific direction and changes in the educational system. Educational style it is planned to evaluate the relevance of educational and information views with modern pedagogical theories of oral Nasafiy works. Empiricmetod help Nasafiy Works study the practical application in the educational system its pedagogical foundations are also considered to be tested in practice. Finally, statistical method statistical data is analyzed to study the application of the educational system of the works of help Nasafi and its effectiveness. Pedagogical foundations of educational and information views on these methodological areas are determined by the possibilities of their application in the system of research and modern education.

Results

The results of this study were based on the study of the pedagogical foundations of educational and informational views in the works of Abu Muin Nasafi, which led to strictly significant results. The information obtained, pedagogical views in the works of Nasafi, and made it possible to understand the inter-garden more deeply next to it between modern educational systems. During the study, the following basic information was achieved: in the works of Nasafi, education and information were found to be interdependent of personnel. In his works, the emphasis of the educational jaroyon is not only on knowledge, but also on the development of information cadre. Nasafi views education, fundamentals, faith, ethics, science and upbringing as a whole. This clearly shows the main directions of Nasafiy pedagogy of information education and educational development in the current educational system . These changes determine the significant importance of the development of the state policy and educational system of the Republic of Uzbekistan, especially in relation to Youth Affairs. The methods in nasafi pedagogy were carried out in parallel with those in which modern education is widely used. In the course of the study, the interaction of the methods of pedagogy shown in Nasafi's works was established in modern pedagogy, in particular in active teaching methods, writing an essay on information issues and methods of discussion. Also, the unique house of "Science and information" in the works of Nasafi today serves the independence of spiritual relations between students and teachers in the field of Education. The collection of statistical studies and proposals has now been noted the importance of reflecting information personnel in the field of Education. Hususan, 72 of the teachers of 100 schools in Uzbekistan are required to introduce akhlokiy values into the educational process. This result suggests that it is effective to put Nasafi's works into practice in the modern educational system. At the same time, in the fact that Nasafi pedagogy should be successfully applied to the educational process and improved by reading .

Mukhokama

The analyzes and statistics identified during the study made it possible to understand the educational and information secrets of Nasafi's works more deeply next to them, thus, in one modern educational system, this is carried out in a pedagogical direction.
