

**HARBIY-VATANPARVARLIK TARBIYASIDA ZAMONAVIY AXBOROT
TEXNOLOGIYALARINING O'RNI VA TA'SIRI**

Maxmudjonov I.I.

Nizomiy nomidagi O'zbekiston milliy pedagogika
universiteti harbiy ta'lim fakulteti magistranti

Annotatsiya: Maqolada raqamli texnologiyalar, media platformalar va interfaol axborot vositalarining harbiy-vatanparvarlik tarbiyasidagi o'rni yoritilgan. Axborot texnologiyalarining ijobiy ta'siri bilan birga, virtual muhitdagi xavf-xatarlar ham ko'rib chiqilgan va samarali foydalanish bo'yicha takliflar berilgan.

Kalit so'zlar: axborot texnologiyalari, media ta'lim, virtual muhit, harbiy-vatanparvarlik, raqamli kontent, yoshlar ongiga ta'sir.

**РОЛЬ И ВЛИЯНИЕ СОВРЕМЕННЫХ ИНФОРМАЦИОННЫХ ТЕХНОЛОГИЙ
В ВОЕННО-ПАТРИОТИЧЕСКОМ ВОСПИТАНИИ**

Махмуджонов И.И.

Магистрант факультета военного образования Национального
педагогического университета Узбекистана имени Низами

Аннотация: В статье раскрыта роль цифровых технологий, медиаплатформ и интерактивных информационных средств в военно-патриотическом воспитании. Наряду с положительным влиянием информационных технологий рассмотрены риски виртуальной среды, а также предложены рекомендации по их эффективному и безопасному использованию.

Ключевые слова: информационные технологии, медиа-образование, виртуальная среда, военно-патриотическое воспитание, цифровой контент, влияние на сознание молодежи.

**THE ROLE AND IMPACT OF MODERN INFORMATION TECHNOLOGIES IN
MILITARY-PATRIOTIC EDUCATION**

Makhmudjonov I.I.

Master's student of the Faculty of Military Education of the
National Pedagogical University of Uzbekistan named after Nizami

Annotation: The article highlights the role of digital technologies, media platforms, and interactive information tools in military-patriotic education. Along with the positive influence of information technologies, the risks present in the virtual environment are also examined, and recommendations for their effective and safe use are provided.

Keywords: information technologies, media education, virtual environment, military-patriotic education, digital content, influence on youth consciousness.

In the context of the 21st century, where globalization and information flows are rapidly expanding, the penetration of various ideological influences into the consciousness of young

people is inevitable. Therefore, implementing military-patriotic education through modern information technologies is one of the most urgent tasks of the education system. With the help of digital tools, young people gain a broad and accurate understanding of historical processes, military heroes, and individuals who fought for state independence.

The rapid development of modern information and communication technologies is creating new opportunities for military-patriotic education. Today, young people mainly obtain information through the internet, social networks, video content, and digital games. For this reason, digital platforms have become an important tool for effectively conveying military-patriotic ideas [1].

Local and foreign studies in pedagogy, psychology, and information technologies show that:

- media tools enliven the educational process;
- military exercises simulated in virtual environments increase young people’s interest;
- patriotic ideas can be quickly disseminated to a wide audience through digital content; however, harmful and manipulative content in the open information space may negatively affect young people’s worldview.

These studies place particular emphasis on issues of media literacy, information culture, and virtual security.

Studying the impact of modern information technologies on military-patriotic education on a scientific basis and developing recommendations for their effective use are important tasks. Through media education, young people gain a broader understanding of historical events, military heroes, and the bravery of defenders of the homeland. Virtual simulators and interactive games provide opportunities to safely experience elements of military activities. All of this contributes to strengthening the spirit of patriotism [2].

Tasks:

- To highlight the role of information technologies in military-patriotic education;
- To analyze the impact of media tools on the educational process;
- To assess the influence of social media content on the minds of young people;
- To develop recommendations for improving media literacy;
- To justify mechanisms for effective use of the virtual environment.

The Role of Information Technologies in Military-Patriotic Education

Information technologies are currently the fastest means for promoting military-patriotic ideas. Through them:

- Documentary films;
- Historical videos;
- Military speeches;
- Multimedia materials about heroes;

are effectively conveyed to the minds of young people.

Since such materials are based on real events, they deeply influence the psychological world of young people.

The Impact of Social Networks and Digital Platforms

Social networks are the largest information space. Through them, military traditions, the activities of defenders of the homeland, state symbols, and national values are widely highlighted. However, in this space:

- False information;
- Manipulative propaganda;
- Harmful ideas

can also spread rapidly.

Therefore, young people need to be media literate and acquire the skill of choosing reliable sources.

The Role of Virtual Simulators and Interactive Learning Tools

(If you'd like me to continue this last section with more specific information or in a different tone, let me know!) [3].

Today, virtual simulators are widely used in military-academic education. They:

- model combat situations;
- teach tactical actions;
- train the use of military equipment;
- provide opportunities to conduct training and experiments in a safe environment.

Such experiences, which are close to real-life conditions, strengthen young people's sense of patriotism.

The Requirement of Information Security and Media Literacy

However, the digital information space also contains false propaganda, manipulative content, and harmful information flows. Therefore, it is necessary to educate young people in information culture, enhance media literacy, and develop skills for selecting reliable sources. The article analyzes methods of using IT tools for constructive purposes and provides pedagogical recommendations [4].

Security issues are extremely important when using information technologies. Young people should be taught the following skills:

- critical thinking;
 - identifying fake information;
 - selecting reliable sources;
 - protecting themselves from harmful content;
 - accepting information that aligns with national interests.
- These skills protect young people from ideological threats.

Pedagogical Advantages of Information Technologies

Modern IT tools:

- make the educational process interactive;
- increase young people's interest;
- simplify the explanation of complex topics;
- develop practical skills;
- strengthen patriotic ideas through visual and auditory means.

When properly guided by educators, IT tools deliver highly effective results[5].

Modern information technologies play an important role in military-patriotic education. Through digital tools, national pride, loyalty to the homeland, historical memory, and civic responsibility are instilled in the minds of young people. However, due to the risks and threats present in the open information space, it is necessary to enhance media literacy and strengthen digital culture. Research findings indicate that using information technologies based on a scientific and pedagogical approach significantly increases the effectiveness of military-patriotic education.
