

USE OF COLUMNS IN TEACHING MORPHOLOGY IN 9TH GRADES

Jiyenbaev Abdibay Jiyenbay ugli

2nd year doctoral student at Karakalpak State University

Annotation : An update on education in our country modernization process, continuous education process, all links Time will answer in the state and higher education as well production of mature new knowledge, in them and its appearance the world, working on oneself, modern technology it is necessary to maintain the skill of purposeful use of achievements after. Future assistant class teachers today in production based on the requirements of "Technology and its training"

key words: Technology , education , knowledge , teacher , morfology.

The methodology of teaching morphology is the structure and formation of words includes an understanding of teaching principles. It is complex linguistic aimed at breaking down concepts into simpler components. Morphology effectively teach connections between words, their root forms, includes specifying prefixes and suffixes. This is a word to the readers helps to understand the patterns and rules that regulate its formation. Morphology is a part of grammar, the forms of words, these forms groups based on ways of formation and certain signs of words, i.e. words learns its division into categories. Therefore, the main focus in teaching morphology focuses on the structure, formation and division of words into word groups. Emphasis on interactive activities, mnemonic devices, and visual aids by giving teachers students' understanding of morphology can strengthen. This hands-on approach makes learning fun and allows students to apply theoretical knowledge in practice. Morphology teaching methodology to introduce students to various morphological concepts includes: inflection, derivative, combination. Students analyze the structure of words to understand how prefixes and suffixes change meaning and learn to recognize different word forms. Provide practical examples and exercises By giving teachers these concepts to students in real life it helps to improve their language skills when using them in scenarios. Teachers use different approaches to accommodate different learning styles can use. Fundamental changes in all areas due to the independence of the Republic of Uzbekistan happened. These changes also apply to the continuing education system, including pre-school and assigns special responsibility to primary education. Republic of Uzbekistan On measures to further improve the primary education system in 2017-2021 of the President of the Republic of Kazakhstan implementation, for all-round intellectual, moral, aesthetic and physical development of children a number of measures have been set to create conditions. Education is a cooperative activity of the teacher and students, and in this process the development of a person, his education and upbringing will also be realized. In the lessons, the teacher is himself conveys knowledge, skills and qualifications to students through training, students and as a result of mastering it, he will have the ability to use it. Learning in the process, students use different forms of mastering, receiving, processing and putting into practice the information being learned based on specific differences. Activities such as word games, group discussions and practical exercises including, students are active in learning the concepts of morphology can participate. Interactive teaching methods on morphology complex linguistics through students' active and engaging learning experiences aimed at improving the understanding and preservation of structures. Teaching morphology is unique because of its complexity and abstractiocauses problems. Teachers provide concepts for

students they need to find interesting ways to simplify. Visual aids and interactive activities teach morphological rules and patterns plays an important role in strengthening understanding. Teachers use different techniques should be used. Also aware of advances in linguistic research effective teaching of morphology and comprehensive learning for students It is very important to present the experience. Pupils learn word structure and and innovative strategies aimed at engaging in the understanding of formation this field includes. It is known that the application of advanced pedagogical and new information technologies in education is educational not only increasing the effectiveness of training, but also applying scientific achievements in practice through independent and logical thinking, well-rounded and highly spiritual person plays an important role in education. Nowadays, interactive methods and information technologies are used in the educational process interest in using it in the process is increasing day by day. Let it be so one of the reasons, so far in traditional education, students only acquire ready knowledge if they have been taught, and the use of modern technologies, their knowledge searching for themselves, independent learning and thinking, analysis, even final conclusions they teach to create it themselves. In this process, the teacher develops personality, formation, creates conditions for learning and education, and at the same time management, serves as a guide. In education, the student is taught to think, to understand the opinion of others and to express this opinion verbally It is independent and focuses on the issue of teaching how to make a literate statement in written form the development of a thinking, literate person with a developed speech culture takes the main place. The way of life and cultural creativity of the nation is studied on the basis of its rich historical heritage. That's why today's teacher has advanced pedagogical and new information technologies are required to be used in the educational process. In conclusion , Based on the above and as a result of the study of several scientific sources in the lessons of the primary class International, if possible, ways of teaching through the use of interactive methods it can be said that it is permissible to study their experiences. This only increases the effectiveness of training sessions Not only that, progress is made in the cooperation of teachers and students. Also the skills of students to choose their own direction and prepare for independent life the teacher's role increases in fulfilling the responsible task of formation.
